

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claim 1 (Currently Amended): A textile material that comprises an HF transponder ~~(12)~~ that comprises a circuit module ~~(16)~~ and an antenna ~~(14, 18, 20)~~ linked therewith and set to a working frequency, wherein the antenna is configured as an E field radiator for a working frequency in the UHF or microwave range, and the E field radiator is completely constituted of woven-in electrically conductive components thread constructions of the textile material itself that can be processed by machine as part of an industrial production process that is customary with textiles, whereby the E field radiator is a mechanically shortened E field radiator which is made to resonate with the working frequency by inductances whose geometry is compatible with the industrial production process that is customary with textiles, and wherein in the production process of weaving,

inductances are made to meander, with such meandering being achieved by a continuous electrically conductive weft thread, which between each weft extends parallel to the warp threads along a distance on the respective selvedge, which distance corresponds to the thickness of several weft threads.

Claims 2-3 (Canceled).

Claim 4 (Currently Amended): The textile material according to claim 2 1, wherein the electrically conductive thread construction is a metal-coated synthetic thread, a synthetic thread around which a metal wire or a stranded metal wire is wrapped, a synthetic thread with an integrated metal wire or an integrated stranded metal wire, or a graphite thread.

Claims 5-7 (Canceled).

Claim 8 (Currently Amended): The textile material according to claim 2 1, wherein antenna connections between the circuit module and the radiator can be implemented by means of connections involving crimping, welding, soldering, or gluing with the use of conductive adhesive.

Claim 9 (Canceled).

Claim 10 (Previously Presented): The textile material according to claim 8, wherein adhesive surfaces of the adhesive connections are UV-permeable, and the conductive adhesive is UV-curable.

Claim 11 (Currently Amended): The textile material according to claim 2 1, wherein the circuit module ~~(16)~~ itself and its antenna connections are enclosed by a casting compound, and the casting compound at the same time is connected to that region of the textile material, which region is adjacent to the circuit module, for mechanical attachment of the circuit module and/or for improving security against tampering.

Claim 12 (Currently Amended): The textile material according to claim 1, wherein the radiator is designed as a symmetrical dipole ~~(14)~~ or as an asymmetrical bar ~~(18)~~ with a counterweight ~~(20)~~.
